

Google Ads API Tool — Design Document

Beit Hady Apartments · Lime Investments

www.beithady.com

1. Company Overview

Beit Hady Apartments is a short-term rental and serviced apartments operator based in Cairo, Egypt, managing 250+ fully-furnished units across multiple residential buildings (BH-26, BH-73, BH-435, and others). Beit Hady is operated by Lime Investments (Lime FZCO), a UAE-registered hospitality holding company. We market directly to Gulf-region travelers and Egyptian corporate clients via Google, Meta, and TikTok.

2. Internal Operations Dashboard

We have built a private, single-tenant web application ('Lime Investments Dashboard') hosted at limeinc.vercel.app. The application is built on Next.js 16 / React 19 / TypeScript and integrates with multiple platforms including Google Ads, Meta Ads, TikTok Ads, Guesty (PMS), Shopify, Stripe, and WhatsApp. It is used exclusively by Beit Hady's in-house operations team — never exposed to external clients or the public.

Access Control:

- Access is restricted to verified Beit Hady staff (admin and manager roles).
- Authentication via Google OAuth + session-based authorization.
- No external user accounts or self-registration.
- The dashboard is not publicly advertised or accessible.

3. How We Use the Google Ads API

We use the Google Ads API (v24) exclusively to manage Beit Hady's own Google Ads account (Customer ID: 424-355-4501) under our MCC (Manager Account ID: 395-304-4686). We do not manage third-party accounts and will never expose the developer token to external parties.

Specific API operations used:

Operation	Endpoint	Purpose
Create Campaign Budget	campaignBudgets:mutate	Set daily budget for new PMax campaign
Create Campaign	campaigns:mutate	Create PERFORMANCE_MAX campaign (PAUSED)
Set Geo/Language	campaignCriteria:mutate	Target Egypt, Gulf, and MENA countries
Create Asset Group	assetGroups:mutate	Group headlines, descriptions, images
Upload Text Assets	assets:mutate	Headlines (≤30 chars), descriptions (≤90 chars)
Upload Image Assets	assets:mutate	Marketing images, square images, logo

Link Assets	assetGroupAssets:mutate	Attach assets to asset group
Update Status	campaigns:mutate	Pause / activate campaigns
Read Metrics	GoogleAdsService (GAQL)	Sync impressions, clicks, spend to dashboard

4. Operator Workflow (Google Ads)

Step 1 — Select Instagram post: Operator browses a grid of recent Beit Hady Instagram posts pulled from the Instagram API. Clicking a post pre-fills the campaign form with the post's caption (parsed into headlines and descriptions) and images.

Step 2 — Review & edit campaign details: Operator reviews and edits: campaign name, daily budget, monthly cap, target countries (ISO codes), Final URL, business name, short headlines (≤30 chars, 3–15), long headlines (≤90 chars, 1–5), descriptions (≤90 chars, 2–5).

Step 3 — Publish: Operator clicks 'Publish (PAUSED)'. The dashboard calls the Google Ads API to create the full campaign structure: budget → campaign → geo/language criteria → asset group → text assets → image assets. Campaign is created in PAUSED state for review.

Step 4 — Review in Google Ads UI: Operator opens the Google Ads UI link returned by the dashboard, reviews the campaign, and activates it when ready. Campaign status can also be toggled (Pause/Activate) from within the dashboard.

Step 5 — Sync metrics: A daily cron job calls the Google Ads GAQL API to sync impressions, clicks, spend, and conversions back to the dashboard database for reporting alongside Meta and TikTok metrics.

5. Data Handling & Security

- OAuth refresh tokens are stored AES-256-GCM encrypted in Supabase Postgres (eu-central-1).
- The developer token is stored in the application's encrypted environment (Vercel Edge Config).
- No user data is collected from Google Ads end-users — only aggregate campaign metrics.
- All API calls are server-side only; credentials are never exposed to the browser.
- The application is hosted on Vercel (EU region) with SOC 2 Type II compliance.

6. Account Details

Company	Lime Investments (Lime FZCO) — trading as Beit Hady Apartments
Website	www.beithady.com
MCC (Manager) ID	395-304-4686
Ad Account ID	424-355-4501
Account Name	Beithady Google Ads
API Use Type	Own business — internal tool, single ad account
Users with access	Beit Hady operations staff (admin + manager roles only)

Third-party clients	None — we manage only our own account
